# Working Experiences

**Backend Engineer - Accommodation**
**Traveloka**
2022 May – Present

- Leverage accommodation partner room nights by doing rate auto adjustment with multiple competitors' rate as benchmark.
- Build a system which incentivizes based on accommodation partner's metrics score, such as rate competitiveness, inventory availability, guest reviews, content quality and check-in problems.
- Own Marketing Programs platform that handles its lifecycle from cost definition, offering, contracting, payment, onboarding, benefit distribution & termination.
- Facilitate accommodation partners to manage their inventories, such as room allotment, rate plan, cancellation policy, occupancy, meal, distribution channel, promotion, and so on.
- Utilize cloud computing service to build, deploy, scale, monitor, and other infrastructure related functionalities.
- Address production environment incidents & inquiries to maintain business as usual.
- Translate product requirements into technical design.
- Actualize projects by collaborating with related parties.

**Full-stack Developer - Technical Application**
**Medco E&P Indonesia**
2019 January – 2022 April

- Automate subsurface engineers recursive excel-based reporting paperworks.
- Improve subsurface engineers productivity by digitizing & centralizing petrotechnical data, which reduces vendor lock-in.
- Creating numerous dashboards (Oil & Gas Production, ESP SCADA, Production Planning, Production Forecast, Reserve, Historian, etc.) by collecting data from various sources, and representing them in an insightful form.
- Enable bulk data submission that is aligned with engineers current storage form so that their data are easily centralized and ready to be consumed by others.
- Visualize and export Excel, PowerPoint, PDF, Power BI, Spotfire, and SSRS based reports.
- Construct and visualize a ML model for facility anomaly detection.

# Education

**Bachelor of Engineering Physics**
Bandung Institute of Technology, 2014-2018
